RDSPACE

KPS AMPLIFIERS CONTROL SOFTWARE PLATFORM

Description

RDSpace is a software platform for managing KPS amplifiers in professional audio systems. Through a single interface, users can handle every stage of deployment - input routing, zone definition, output optimization, and speaker calibration - With real-time monitoring. The software scales smoothly from small venues to large, multi-zone networks, giving operators quick access to presets or deeper configuration tools as the project demands.

Features

- Windows and MacOS compatible
- Desktop and browser-based application
- Full device control
- Speaker presets and user presets
- Linear-phase FIR filtering management
- Flexible routing
- Parametric EQ
- Precision delay
