

S 5012

BASS REFLEX SUBWOOFER

Description

The S 5012 is a vented, high output, compact subwoofer system where the physically small size and impact of a 12-inch driver is desired, and works equally well for portable or install situations. Extending the frequency response of these systems to below 40Hz this highly efficient design is capable of providing output levels normally associated with considerably larger enclosures.

A system suited to background music playback in applications ranging from clubs, bars and cafes, right through to theatres and AV presentations. The low-frequency transducer is a 12" woofer with a 2,5" voice coil. This new woofer design is the result of the latest refinements in RCF experiences in compact active and passive subwoofer design, resulting in a fast and controlled reproduction of the bass frequency range. It is engineered to complement MEDIA series full-range loudspeakers and is particularly well-suited in high-quality multimedia applications.
